

Featured GitHub integrations

Use GitHub extensions to work seamlessly in repositories on GitHub.com within third-party applications.

Editor tools

You can connect to GitHub repositories within third-party editor tools such as Visual Studio.

GitHub for Visual Studio

With the GitHub for Visual Studio extension, you can work in GitHub repositories without leaving Visual Studio. For more information, see the official Visual Studio extension [site](https://visualstudio.github.com/) or [documentation](https://github.com/github/VisualStudio/tree/master/docs).

GitHub for Visual Studio Code

With the GitHub for Visual Studio Code extension, you can review and manage GitHub pull requests in VS Code. For more information, see the official VS Code extension [site](https://vscode.github.com/) or [documentation](https://github.com/Microsoft/vscode-pull-request-github).

Project management tools

You can integrate your personal or organization account on GitHub.com with third-party project management tools, such as Jira.

Jira Cloud and GitHub.com integration

You can integrate Jira Cloud with your personal or organization account to scan commits and pull requests, creating relevant metadata and hyperlinks in any mentioned Jira issues. For more information, visit the [Jira integration app](https://github.com/marketplace/jira-software-github) in the marketplace.

Team communication tools

You can integrate your personal or organization account on GitHub.com with third-party team communication tools, such as Slack or Microsoft Teams.

Slack and GitHub integration

The Slack + GitHub app lets you subscribe to your repositories or organizations and get real-time updates about activity for the following features on GitHub.com.

- * Issues
- * Pull requests
- * Commits
- * Discussions
- * Releases
- * GitHub Actions
- * Deployments

You can open and close issues, comment on your issues and pull requests, approve deployments, and see detailed references to issues and pull requests without leaving Slack. The app will also ping you personally on Slack if you are mentioned

as part of any GitHub notifications that you receive in your channels or personal chats.

The Slack + GitHub app is compatible with [Slack Enterprise Grid] (<https://slack.com/intl/en-in/help/articles/360000281563-Manage-apps-on-Enterprise-Grid>). For more information, see [GitHub integration in Slack](/en/enterprise-cloud@latest/integrations/how-tos/slack).

You can also integrate the Copilot cloud agent with Slack, enabling you to use AI-powered coding assistance directly within your team's communication platform.

Use Copilot cloud agent to collaborate with your team on agent-assisted work. You can @mention GitHub in channels, threads, and direct messages to work alongside teammates and Copilot on research, planning, and coding tasks. Teammates can add context, steer Copilot sessions, monitor progress, and then review the resulting artifacts.

For more information, see [Integrating Copilot cloud agent with Slack] (/en/enterprise-cloud@latest/copilot/how-tos/copilot-integrations/integrate-cloud-agent-with-slack).

Microsoft Teams and GitHub integration

The GitHub for Teams app lets you subscribe to your repositories or organizations and get real-time updates about activity for the following features on GitHub.com.

- * Issues
- * Pull requests
- * Commits
- * Discussions
- * Releases
- * GitHub Actions
- * Deployments

You can also open and close issues, comment on your issues and pull requests, approve deployments, and see detailed references to issues and pull requests without leaving Microsoft Teams. The app will also ping you personally on Teams if you are mentioned as part of any GitHub notifications that you receive in your channels or personal chats.

For more information, see [GitHub integration in Teams](/en/enterprise-cloud@latest/integrations/how-tos/teams).

You can also integrate the Copilot cloud agent with your Microsoft Teams app, enabling you to use AI-powered coding assistance directly within your team's communication platform.

Use Copilot cloud agent in Microsoft Teams to collaborate with your team on agent-assisted work. You can @mention GitHub in channels, threads, and direct messages to work alongside teammates and Copilot on research, planning, and coding tasks. Teammates can add context, steer Copilot sessions, monitor progress, and then review the resulting artifacts.

See [Integrating Copilot cloud agent with Teams](/en/enterprise-cloud@latest/copilot/how-tos/copilot-integrations/integrate-cloud-agent-with-teams) for more information.
